SpamWeed Professional Anti-Spam

In these times it is difficult to communicate without e-mail. The management of e-mail messages is becoming more and more important both in private and business life. Managing your e-mail often consumes too much of your valuable time. It is much easier when annoying interruptions such as e-mail advertisements and messages from people from whom you would prefer not to receive any e-mail are eliminated automatically.

Such unsolicited messages are usually called "Spam" or "Junk mail".

Spam can lead to the following problems:

- *You lose precious time by manually removing unwanted e-mail.*
- *You are referred to web sites you would prefer not to waste time on.*
- *You are involuntarily exposed to offending, shocking or unnecessary information.*
- *Viruses and diallers (automatic dial-up software that connects your computer to another PC or server through your modem and telephone line for, e.g., € 2.50 p/min.) inflate your telephone bill without you being aware of it.*
- *You waste valuable time cleaning up your inbox.*
- *In some cases, hackers can gain access to your system through a spam message (built-in program hidden in the spam message which installs itself automatically).*

As you probably have guessed by now: spam is a <u>very serious</u> problem that should not be underestimated.

Fortunately, Vaxxin BV offers a solution: a completely new anti-spam product by the name of SpamWeed.
SpamWeed is a highly advanced and intelligent anti-spam program that filters 95% of unwanted mail messages immediately after installation.

SPAMWEED

SpamWeed is a spam filter that has received high ratings (www.tucows.com) because of its effectiveness and ease of use. SpamWeed is a high-quality, self-learning anti-spam product that does not filter based on keywords or sender addresses alone.
The main filtering technology is based on the allocation of word values (Bayesian filter, please refer to http://www.bayesian.org for more information).
This highly effective and unique method ensures your e-mail inbox remains free of spam!

SPAMWEED, simple and effective!

Eliminate one of the main irritations of the Internet! Block all e-mail messages that you find offending or just plain annoying.

SpamWeed uses a refined and revolutionary technology to block spam and place mail viruses into quarantine before they enter your inbox. SpamWeed's auto-learning engine ensures that new types of spam are also blocked virtually immediately. Repeated tests and the experience of it's users have shown that SpamWeed blocks more than 99% of spam with virtually no "false positives".
(False positives: messages which are unjustly marked as spam and blocked.)

Features:

- **Immediate relief:** after installation SpamWeed will block at least 95% of the spam messages.
- **Self-learning:** after about a week of using SpamWeed, the percentage of blocked spam messages increases to more than 99%.
- **White List:** allows you to accept e-mail messages from friends and acquaintances without filtering.
- **Black List:** allows you to block unwanted e-mail messages from "well-known sources".
- **Conforms to your personal e-mail behaviour:** there are as many opinions on spam as there are people in the world. SpamWeed analyzes your authorisation behaviour and will automatically detect what you, the user, classify as spam.
- **User friendly and time saving:** the most important reason to use our spam filter is saving valuable time and preventing the frustration of spam assaults. SpamWeed is by far the most effective and user-friendly anti-spam product available. It does not require complicated configuration and rules. Try and see for yourself how this seemingly simple but high-quality anti-spam product eliminates your main source of irritation.

System requirements:

- Operating system: Windows 98, ME, 2000, or XP.
- Internet connection and a POP3 e-mail account.
- SpamWeed for POP3 works with all e-mail clients supporting POP3, such as: Outlook, Outlook Express, Incredimail, Eudora, The Bat!, Mozilla, Netscape, Becky!, and Pegasus.
