What's New in Crystal Enterprise™ Enhanced SAP® Edition

Version 9 delivers significant productivity gains across enterprise reporting deployments, by helping IT and end users use the system more effectively while providing market-leading scalability, reliability and flexibility.

Crystal Enterprise Enhanced SAP Edition version 9 accomplishes two major goals. It offers support for version 9 of Crystal Decisions products, and it combines reporting solutions for SAP R/3 and SAP BW. Rather than addressing the needs of SAP R/3 and SAP BW customers with different products, as was previously done, the new version offers a single reporting solution for both.

The components of Crystal Enterprise Enhanced SAP Edition – Crystal Enterprise and Crystal Reports offer powerful new functionality in version 9.

New in Crystal Enterprise™ Enhanced SAP Edition 9

In addition to enhanced end user tools, report design advances and new features for developers, Version 9 also offers a variety of platform level enhancements. These include the addition of full Unicode support for multi-lingual environments and more granular security settings.

Report developers and power users can leverage several innovative solutions for increased power and productivity in report design and web delivery. More than 50 new features and enhancements are provided in this release such as a report object repository for reuse of reporting objects offering more power to report developers.

Platform and Language Support

Crystal Enterprise Enhanced SAP Edition supports the following platforms.

Operating Systems: Microsoft® Windows® operating systems. For IBM® AIX® and Sun Solaris™ support customers may use version 8.5.
SAP R/3: SAP R/3 4.6c or 4.7.
SAP BW: SAP BW 3.0b or 3.1c.
