

CONTENTKEEPER ALLOWS ORGANISATIONS TO MONITOR, MANAGE AND CONTROL STAFF ACCESS TO THE INTERNET

Ultra flexible performance. Suitable for small office to large enterprise environments.

Requires NO operating software maintenance. All software updates and control list updates are downloaded and applied completely automatically.

ContentKeeper –SME – Supports sites from 25 users to approximately 2,500 users with Ethernet Interfaces up to UTP 100Mbit/s.

ContentKeeper – LE – Suitable for larger Enterprises with sites from 2,000 up to approximately 50,000 users and Gigabit Ethernet Interfaces.

Closed Loop Collaborative Filtering™ Technology

(Worldwide, collaborative site discovery, analysis, classification and re-classification)

ContentKeeper units in the field are designed to poll the ContentKeeper Datacentre hourly to receive control list updates of newly discovered and processed URLs. During this process, any new suspect URLs discovered locally, are encoded, encrypted, compressed and sent back to the Datacentre for anonymous submission to our AI analysis and categorization engines. Sites that are then confirmed to fall into one of the control categories are included in the Control list updates and sent out to every ContentKeeper unit in the field every hour.

The ContentKeeper user base worldwide collaborates to help find, analyse, categorize and re-classify new sites 24 hours a day seven day a week, automatically

Plug and Play installation

- Network transparent bridge device (compatible with and invisible to other network devices)

Fail safe design

- High Availability Module (HAM) – Automatic fail-safe electro-mechanical Ethernet bypass for critical network installations (optional)

Browser based Management

- Secure local and remote web browser based management

Security

- Hack proof transparent ethernet bridge design
- Helps protect against web based Virus attacks

Local and global control list of millions of URLs

Real time discovery, analysis and classification engine

Specifications

- Transparent Ethernet Bridge
- 2 x 10/100Mbit/s UTP bridging ports (model CK-SME) or 2 x 10/100/1000Mbit/s UTP bridging ports (model CK-LE)
- Plus
- 1 x 10/100Mbit/s UTP management port
- 1 x High Availability Module (HAM) interface port
- 1 x Console port (serial RS232C)
- Rack mountable models –
 - ContentKeeper SME - 1 rack unit
 - ContentKeeper LE - 2 rack units

Please note: ContentKeeper software can also be installed onto your own Intel/Server hardware if preferred.
