

Document security

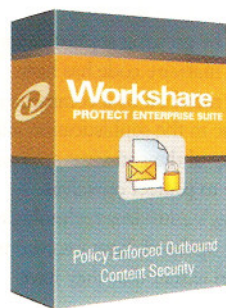

Enterprise Digital Rights Management (E-DRM or ERM) refers to the use of DRM technology to control access to corporate documents.

For this group of products, if you disregard cost, there is something for everyone. If, cost is a factor, you need to understand your requirements very well in order to justify the expense of protecting your documents.

The general capabilities of the E-DRM products we tested were very similar. They allow encryption of documents, protection in transit and at rest, designation of permitted users of individual documents, and disposition of the documents when in use. This includes allowing the document contents to be copied, printed or screen-captured. Some products have considerably more capability,

determining what content is allowed to be transferred out of the organization, for example.

However, they come at a price, not just in terms of an often hefty cash outlay, but also in human resources for managing the systems. You must examine your requirements carefully if you want to select the most effective and cost-effective product for your needs.

Workshare Protect Enterprise	Workshare	A Best Buy for its ease of use, richness of features, excellent documentation and support.	www.workshare.com	SC BEST BUY

Email filtering

With the rising tide of spam, email-borne security threats and the danger of employees abusing email, it is essential that organizations take control of their email systems.

The cost of spam goes far beyond supplying extra capacity for clogged email servers and storage space for the millions of unwanted emails. There is also the

cost of IT departments wasting dozens of days a year dealing with it. And it is the secondary affects of spam's other security threats that are the most expensive.

Spam is a major driver behind the alarming rise in the number of corporate data breaches. Feeling the impact of international awareness, more spammers are using illegitimate providers in

less-regulated nations.

Spam and security breaches are the most serious email-related problems facing enterprises, but there is also the potentially devastating affect that email abuse can have on corporate reputations.

Email content filtering monitors ingoing and outgoing emails and blocks those that don't meet the company's acceptable use policy.

MXtreme Mail Firewall 800
