Comprehensive Mobile Office Environment

As of today email communication became a critical thing as interpersonal communication skill within an organization or in your daily life. There might be nothing more important than efficient communication in the work of a company. The most common need for mobile workers is to access their device's email, contacts, calendars, tasks and notes. Today, many native and third-party solutions require device control to manage enterprise data, so lack the flexibility of the BYOD initiative. In addition, it does not provide the same functionality as the desktop email application (MS Outlook), and does not provide essential data security controls. The need to protect corporate data on mobile devices is an integral part of enterprise IT.

Why Nine Work

Nine Work is a full-fledged email application for Android based on Direct Push technology to synchronize with Microsoft Exchange Server using Microsoft Exchange ActiveSync, and also designed for entrepreneurs or ordinary people who want to have efficient communication with their colleagues, friends, and family members at anytime, anywhere. Nine Work offers essential email, contacts, and calendars in one app for both iOS and Android devices, providing the features you want and the security controls your business requires. Nine Work provides a very secure container for business email, separating your corporate data from your personal data and providing them with a truly safe and easy-to-use solution. Nine Work stores and encrypts data on-device and in transit, so if you lose or stolen your device, you can erase your apps and data separately without erasing the entire device. Also, data is not a problem since the data is only a copy on the corporate Exchange server. Nine Work can digitally send and receive signed and encrypted messages through S / MIME using various algorithms (Sign: SHA-1, SHA-2, Encrypt: AES-256, AES-192, AES-128, 3DES, DES, RC2-128, RC2-64, RC2-40). Nine Work is compatible with MDM platforms such as Intune, AirWatch, MobileIron, Maas360, etc based on Android Enterprise. In addition, the integrated versions with Intune, AirWatch, and MobileIron SDK are also available.

Key Features

Secure
• Connectivity - TLS 1.2, Client Certificate
• Storage Encryption - Database, Attachment Encryption (AES-256)
• Server Policy - Exchange Server Policy (Password, Encryption Policy ...)
• S/MIME - Sign (SHA-1, SHA-2), Encrypt (AES-256, AES-192, AES-128, 3DES, DES, RC2-128, RC2-64, RC2-40)
• Right Management - Microsoft IRM Spec - https://goo.gl/msKCuu (Android / 9Folders)
• Global Address List (GAL)
• Direct Push Synchronization with Exchange ActiveSync.
• Enterprise Configuration Extensions
• Integrates with MDM platforms

Intuitive UI
• Great User Experience & Beautiful GUI
• Full HTML (inbound, outbound)
• Widgets (Unread badge, Email, Tasks, Calendar month view)
• Actions (Swipe, Notification)
• Select folders to push (Email notification per each folder)

Simple & Efficiency
• Automatic setup for many popular email services like Office 365, Exchange Online, Hotmail, Live.com, Outlook, MSN or Google Apps
• Hybrid Email Search (Integrate with fast local and online search)
• Conversation Mode
• Notes, SMS Sync (Exchange 2010 or higher)
• Tasks Sync (Tasks, Reminder, Categories)
• Contacts Sync (Categories, Ringtone)
• Automatic reply (Out of Office signature)

Convenience
