

O&O FormatRecovery V4 Data Recovery from Deleted Partitions!

With the new O&O FormatRecovery V4, O&O offers the ultimate supplement to its already impressive line of data recovery products. Guiding users with an on-screen Assistant, O&O FormatRecovery V4 enables the recovery of deleted or formatted partitions or hard disks to their pre-deletion form. File and directory information is likewise restored.

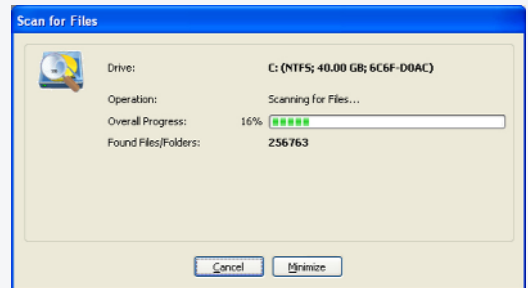

■ Recovery of complete storage media

By use of a specially developed algorithm, O&O FormatRecovery V4 can search for files on formatted or deleted disks and restore them even when the data are heavily fragmented! In contrast to O&O UnErase V4 and O&O DiskRecovery V4, O&O FormatRecovery V4 can also restore files with missing directories and configuration information.

■ Special search algorithms

The advanced functions of the special search algorithms in O&O FormatRecovery V4 enable it to first detect and then ignore defective sectors. This means it can recover data from storage media that is damaged but still accessible. The special algorithm also supports the recovery of hidden or system files with their corresponding attributes, making possible the recovery of empty file systems in order to completely reconstruct a whole storage medium. The creation of a new system is often therefore unnecessary and through its impressive functions and operating methods, O&O FormatRecovery V4 can wholly compensate for the absence of a system back-up.

■ Supported storage media

O&O FormatRecovery V4 can recover data from all Windows-supported data storage media. This includes, among others, internal and external hard disks (IDE, SATA, SCSI etc.), digital cameras, MP3-Players, USB and Memory-Sticks, memory cards, CDs, DVDs and diskettes. A data storage medium need only be recognized by Windows a data recovery to be possible. For this reason, it is not necessary to run a compatibility check in Windows to see of a certain medium is compatible.

The rescued data can then be saved on any windows supported storage medium, provided it is not the medium from which the data was just recovered.

Product Issue	O&O FormatRecovery V4.0	O&O DiskRecovery V4.0
Recovery of any type of data	+	+

Ignores defective sectors	+	-

Product Features

- Recovery of files and directories
- Supports all Windows file systems on all Windows recognized storage media
- Recovery of empty directories and files
- Recovery of hidden or system data including file attributes
- Assistant-guided operation
- Specially developed search algorithm to recover entire data storage medi

System Requirements

- System with Intel® Pentium III or comparable Processor
- MB RAM
- 30 MB free hard disk space
- CD or DVD Drive
- VGA Graphic Card with minimum 800x600 with 256 colors
- Keyboard and Mouse
- Windows NT 4.0, Windows 2000, Windows XP, Windows Server 2003 (all Editions)

Supplementary Products

- O&O BlueCon XXL V5
- O&O DiskRecovery V4
- O&O RescueBox V4
- O&O UnErase V4
