

Before Tranxition™ Migration *Studio*, corporations with dozens, hundreds or even thousands of mission critical applications could not preserve their end user settings and data. The result? Frustration, wasted time and money.

With *Studio* - a powerful visual development tool - this process can be a cost effective, trivial task. In just minutes, *Studio* generates deep migration support for backup, restoration, and migration for application, system, and end user "personality."

Support the Applications That Drive Your Business

An application "personality" is defined by its set of persistent settings and user data. With *Studio*, developers rapidly define the settings and data to be moved during a personality migration.

Without *Studio* and Personality Transport™ Professional (PT Pro), application migrations that preserved the end user settings and data were almost impossible. The IT professional needed detailed information about what to migrate – registry settings, files, and so on – but frequently had to implement complex scripts in a text-based format that were never designed for commercial use.

With *Studio*, select the verbs for the item you want to migrate, such as "Migrate Registry Key," and drag it into the Action Window. Then just fill in a few properties about the action. Once you've described the migration -- compile it, debug it, and drop it into PT Pro. It's that simple.

Cut Your Cost and Hassle Dramatically

Studio substantially reduces the expensive time and effort needed to move your in-house, custom, and mission critical application settings and eliminates the need for scripting. In addition to saving time and effort, *Studio* is even easier to use than Microsoft Visual Basic.

Get Project-Oriented

With *Studio* you gain the benefits of "code management" that are second nature to serious developers. You become "project" oriented rather than "script" oriented, making management of application personality on a project-by-project basis, rational and quick. With some companies having thousands of custom applications, managing hundreds or thousands of scripts is too expensive and prone to error.

Customized Menus With *Studio* and PT Pro

Studio also allows IT departments to customize PT Pro's menus, so users only see what you want them to see. *Studio* can also specify application migration objects by group, enabling IT to deliver only those choices that make sense for a specific set of users. This avoids the problem of having irrelevant migration objects available for a group of users that cannot properly use them.

Rational and Scalable

Studio makes it easy to manage thousands of migration objects in a structured, rational manner, so it has "administrative" and "development" scalability. This feature pays dividends today and down the road.

***Studio* Benefits:**

- Enables PT Pro to Migrate Custom Settings, Data, and Applications
- Eliminates Traditional Script Writing Hassles
- Reduces Expensive Development Time
- Easy to Use "Drag and Drop" Function

IT professionals, corporate developers, software vendors and service providers will find that *Studio*, the latest addition to the PT Pro family of products, is the most powerful and reliable migration support tool available today.

Call Tranxition today toll-free at 1-866-277-8776. Find out how PT Pro and Tranxition Migration *Studio* can ease your migration pain.
